

New England ITS Vendor Showcase

Vizzion: Imaging Software and Solutions

By

Keith Anderson

Vizzion started in 2000 as a computer vision consultancy and has the long term vision of having real time, labelled road imagery -- everywhere, to help save lives, time, and frustration. Vizzion launched Drives in 2022, a service that provides live and historical imagery from tens of thousands of internet connected vehicles while they drive throughout North America; altogether we cover about 2.5 million miles of roadway per day. Vizzion's services are trusted by Microsoft, Iteris, Blycsny/Bentley Systems, iHeartMedia, Everbridge, Crisis24, the Pacific Disaster Center, Baron Weather, INRIX, and other major brands. Vizzion has helped NCDOT and other agencies get more situational awareness from their roadways, monitor work zones, snow removal, infrastructure, impacts of weather and disasters, and respond with more confidence to incidents on their roadways.

Thursday, May 22, 2025

12:00 – 1:00 PM
